The Future of Brownfields

Critical paths for regional redevelopment

Agenda

- Introductions
- About design
- About brownfields in the Calumet Region
- About what we are doing

Hi!

Tell us more

“When you talk, you are only repeating what you already know. But if you listen, you may learn something new.”

What is a

brownfield

A **brownfield** is a property on which expansion, redevelopment, or reuse may be complicated by the **presence, or perceived presence, of contamination.**

Former landfills

Vacant residential buildings

Abandoned industrial sites

Contaminated natural areas

How would you go about?

Knowledge integration

Brownfields

Macro

Strategies

Meso

Operations

Micro

Tactics

Brownfields are an adaptive system

Strategies for restoring local economies through brownfields redevelopment

INVOLVE RESIDENTS

*Decentralize governance
in neighborhood*

Local resident involvement in property maintenance, land ownership and community planning leads to an increase in safety and neighborhood value.

LEVERAGE ASSETS

*Generate value from
blighted sites*

Blighted sites can bring value to the region when considering the potential for the materials available on the site, its location, or its historic significance

INTEGRATE INFRASTRUCTURE

*Connect physical and
digital components*

The integration of hard and soft infrastructures is critical for the adaptability of the system, and for understanding the multiplicity of resources through data.

EMPOWER SCIENCE

*Connect the community
to the environment*

New technologies provide means for tracking of the environment, building understanding amongst scientists and local residents about the interaction between humans and natural ecosystems.

STRENGTHEN LOCAL ECONOMY

*Absorb external investments
and scale existing efforts*

By investing resources in programs that connect local residents to the region, solutions can support, retain and grow intellectual and productive capital in the region.

Prototyping infrastructures

Integrating strategies

Mini Calumet:

a simulation tool for reconnecting local youth population with the environment through educational programs.

Flag Calumet:

a modular installation structured on the intersection between art + science + sensor technology that serves as a facilitator between local residents and the environment

Value Calumet:

a digital platform for civic empowerment that mediates community-based organization efforts to optimize local resources.
